

REVOLUTIONAL®...change your attitude

This year Carvico remains loyal to the **Revolutional® Family** presenting the 155 g/m² version, in black colour, with **coldblack® Sun Reflector - UV Protector** finishing.

coldblack® finishing technology offers two-fold protection for textiles exposed to the sun. **coldblack®** reduces the absorption of sunlight while providing reliable protection from harmful UV rays. Therefore, dark colours, in particular, heat up less, even in direct sunlight and stay cool to the touch. Applied to clothing the wearer perspires less, feels better and is capable of greater performance.

Revolutional® with **coldblack®** technology unites the well-known features of Carvico's hi-tech fabric **Revolutional®** with Schoeller Technologies AG's **coldblack® Sun Reflector - UV Protector** finishing, providing total protection from UV rays (UPF 50+).

The fabric fits like a second skin, dries rapidly and guarantees exceptional breathability, keeping the body fresh and active. It is extremely light and ultrafine, is abrasion and pilling resistant, with a thickness reduced to 50% of classic silk charmeuse, yet at the same time it ensures optimum coverage.

It is ultra-resistant to chlorine – thanks to the fabric's innovative construction and the use of Xtra Life LYCRA® - and to sand, which does not remain trapped between the fibres. Non-curling: the fabric is suitable for use in making garments with raw-edged detailing because it does not curl at the sides, thanks to its elastic retention.

*Composition: 71% Polyamide Micro - 29% Xtra Life LYCRA®
Weight: 155 g/m²*

**coldblack® is a registered trademark of Schoeller Technologies AG, Switzerland (patent pending)*
