SPIDER: CAUGHT UP BY ITS APPEAL!

Carvico collection expands thanks to the addition of a brand new, innovative fabric: **Spider**, the bi-elastic micro mesh, is about to sweep the swimwear and sportswear world away.

Spider's main characteristic is its amazing stretch that will ensure the best fit to any garments, along with extreme comfort and high breathability.

Such features make it the ideal fabric for the production of items that will follow and support your every move.

Spider is also a real must-have for the summer season since it was conceived to be matched with the other beachwear fabrics of the Carvico collection and to make them even more creative and unique, with an added value in terms of fantasy and design, for cutting-edge and ultra-stylish swimwear.

Spider is now available also in a polyester version, ideal for transfer printing.

Composition: 80% Polyamide - 20% Elastane

Weight: 150 g/m²
