## Natural technology with **Borneo**

**Eco-responsibility: this is the key word for Borneo, the very latest fabric by Carvico SpA, world leader in the manufacture of warp-knitted fabrics. By using waste material, this eco-fabric saves precious resources.**

**Made with 78% polyester fibre recycled from scrap PET bottles and traditional recycling, Borneo is the perfect expression of the company's "Green Vision" code of ethics: the eco-compatible production of fabrics in complete harmony with the environment and nature. Borneo is pure technology:**

**it contains the exceptional XLA™ stretch fibre, resistant to chlorine, sweat and the combination of sunscreens and UB rays, developed by Dow Fiber Solutions.**

**Totally breathable, elastic and easy-care, it sculpts the contours and moulds the athlete's body, ensuring durability over time. It is the ideal fabric for the creation of reliable, resistant high quality garments. Eco-sustainable Borneo guarantees high performance for competition swimwear, fashion and the sports world.**
