*Carvico presents Melville, the first fabric made of 100% recycled polyester and p.b.t*

Carvico has launched the first fabric made of PBT with a sustainable content. Indeed, the polyester used in combination with polybutylene terephthalate is 100% recycled from plastic bottles (PET).

An eco-friendly fabric which puts together excellent techno-features, high performance and a green soul, created by Carvico to contribute to reduce plastic pollution.

It is worth remembering that a PET bottle abandoned in the environment takes over 700 years to start decomposing, and

**RECYCLED BOTTLES**  
Post-consumer bottles are collected

**BOTTLE FLAKES**  
Bottles are washed and chopped into flakes

**CHIP**  
Bottle flakes are melted and transformed into chips

**RECYCLED FIBER**  
Chips are melted and made into yarn

**MELVILLE FABRIC BY CARVICO**

nowadays 20 million tons of bottles are produced globally! Recycling means acting responsibly, giving a new life to plastic and making something real for the safeguard of our planet.

Melville properties make it ideal for the creation of chlorine proof, training and competition swimwear, designed to fit the body perfectly, to protect the skin from UV rays (UPF 50) and to be long lasting.

# WHEN SPORT MEETS SUSTAINABILITY

*Renew Folk and Renew Wave:  
Jersey Lomellina launches two brand  
new eco-friendly fabrics*

**C**an a performance fabric for sportswear also be stylish and eco-friendly? The answer to this question comes from Jersey Lomellina and its collection of sustainable fabrics named JL Renew, which has now expanded with the addition of Folk and Wave, designed for the creation of comfortable, high performance, trendy and energetic techno-garments.

Renew Folk features an elegant and functional, flat, glossy ribbed structure, which is perfect for tight-fitting but comfortable garments, whereas Renew Wave, stands out for its exclusive crispy, 3D texture creating playful and intriguing light/shadow effects.

Versatile and functional, both these fabrics boast an ethical soul since they are made of ECONYL®, a regenerated Nylon yarn from pre- and post-consumer materials, such as ghost fishing nets. For many years now, Jersey Lomellina has been enforcing a set of innovative environmental policies aimed at creating a truly sustainable supply chain thanks to a cutting-edge production plant and also to the use of recycled raw materials employed for the creation of high performance fabrics which can appeal to both athletes and ... our planet!
